(54) Title: COLLAPSIBLE IRRADIATION DEVICE

(57) Abstract: The invention relates to an irradiation device (1) comprising a base part (2), a support (3) longitudinally extending from the base part (2) and enclosing an angle (a) with a vertical axis V, and a housing (4) comprising a central axis (5), at least one radiation unit (6), and a radiation emission plane (7), said housing (4) being pivotally connected to said support via a pivot shaft (8), said housing (4) being pivotable between an operational position (A), in which the radiation emission plane (7) is horizontal (X), and a rest position (B), in which the radiation emission plane (7) is vertical (Y), and the central axis (5) of the housing (4) encloses the angle (a) with the vertical axis (V), the pivot shaft (8) extending from the support enclosing an angle (a/2) with the horizontal plane (X) and with the vertical plane (Y). Because of the arrangement of the pivot shaft at this angle relative to both these planes, the housing can be fluently rotated about the pivot shaft between the operational position and the rest position. The movement of the housing from the operational position to the rest position, and vice versa, requires only a single rotation about a single pivot axis.
